

PREMIUM SUPERFOOD INGREDIENTS

from South America for your clean label products

Superfoods contain high levels of vitamins, minerals and antioxidants - substances that are helpful to promote health and wellness. Our superfruit powders preserve the macro and micronutrients of these amazing fruits. We also offer botanicals and botanical extracts.

► Fruit Powders

Guarana		●	●	●			●
Guayusa		●	●		●		●
Maca		●	●				●
Yacon						●	●
Yerba mate		●	●		●		●

► Fruit Powders

Açaí: Highly nutritious, very energetic and rich in antioxidants. The careful freeze-drying process yields a unique ingredient, remarkable for its superior quality.

Acerola: Excellent source of the antioxidant ascorbic acid (vitamin C) and organic-certified. It is used in beverages, supplements, energy bars, organic baking and as a natural meat preservative.

Banana: Bananas provide a substantial amount of energy right after they are consumed, and its taste is widely appreciated. Due to their high potassium content, experts recommend including bananas in diets.

Camu camu: From a wild tree from the Amazon rainforest of Brazil and Peru, it is regarded as superfood due to its high vitamin C content.

Spray-dried fruit powders

We now offer a selection of spray-dried fruit powders that are excellent flavors for various applications: açai, acerola, camu camu, coconut water and lemon. **Please, inquiry us about other fruits and flavors.**

Coconut water: Refreshing and highly hydrating: a true natural isotonic beverage with a soft aroma and flavor. The powder can be mixed with fruits and beverages, used in electrolyte-rich isotonic drinks, supplements, smoothies and shakes.

Golden berry: Regarded as a superfood due to its nutrients and high content of Vitamin C. It contains linoleic and oleic acid, two essential fatty acids, and antioxidants.

Lucuma: An Incan fruit that Peruvians have been enjoying since 200 A.D. It is a symbol of longevity and fertility. It contains essential nutrients and beta-carotene.

► Botanicals and Extracts

Coffee fruit ("Cascara"): The ripe coffee fruit is a lively, red cherry that envelops the coffee bean. The whole fruit flavor and nutritional profile is receiving growing attention for different applications.

Guarana: An indigenous Amazonian seed rich in caffeine, its main functional component, up to four times higher than the amount found in coffee beans. An attractive ingredient in energy-boosting formulations such as beverages, bars and powder blends.

Guayusa: Originally from the Ecuadorian Amazon rainforest, it has a unique taste: mild, earthy, slightly sweet with grassy notes and no tannins. It has a slightly higher caffeine content than yerba mate and yet similar beneficial health effects.

Maca: Native Peruvians have used maca root for both nutrition and medicinal purposes. The edible part is the multi-colored root (yellow, red, and black). Maca is energizing and rich in sugars, proteins, starch and essential nutrients (especially iodine and iron).

Yacon: It is regarded as a superfood: an antioxidant, natural prebiotic and low caloric sweetener.

Yerba mate: Yerba mate (or Mate) has been consumed by ancient Indigenous people in South America for centuries. Mate teas are an old tradition due to their caffeine content. The stimulating and diuretic effects are attributed to caffeine, theobromine, flavonoids and saponins present in the herb.
